

A Complete InfoGov Solution

powered by
everteam

Today's most admired organizations care about their information assets.

Nyxeia customers use the Information Governance Suite of software to control the far-flung information spread across their enterprise. Organizations rely on Nyxeia's Everteam-powered software to connect to disparate systems and discover, analyze, clean and classify their information. With this software, customers can apply relevant policies that ensure compliance with business rules and industry regulations, build a strong foundation for customer privacy and trust, and improve operations.

The Nyxeia Information Governance Suite includes three powerful products that manage both structured and unstructured information throughout its lifecycle.

WHAT ARE YOU TRYING TO DO?

Remediate
Dark Content

Address
Compliance

Cut Costs

Migrate to
the Cloud

everteam.discover

Analyze & Organize Information

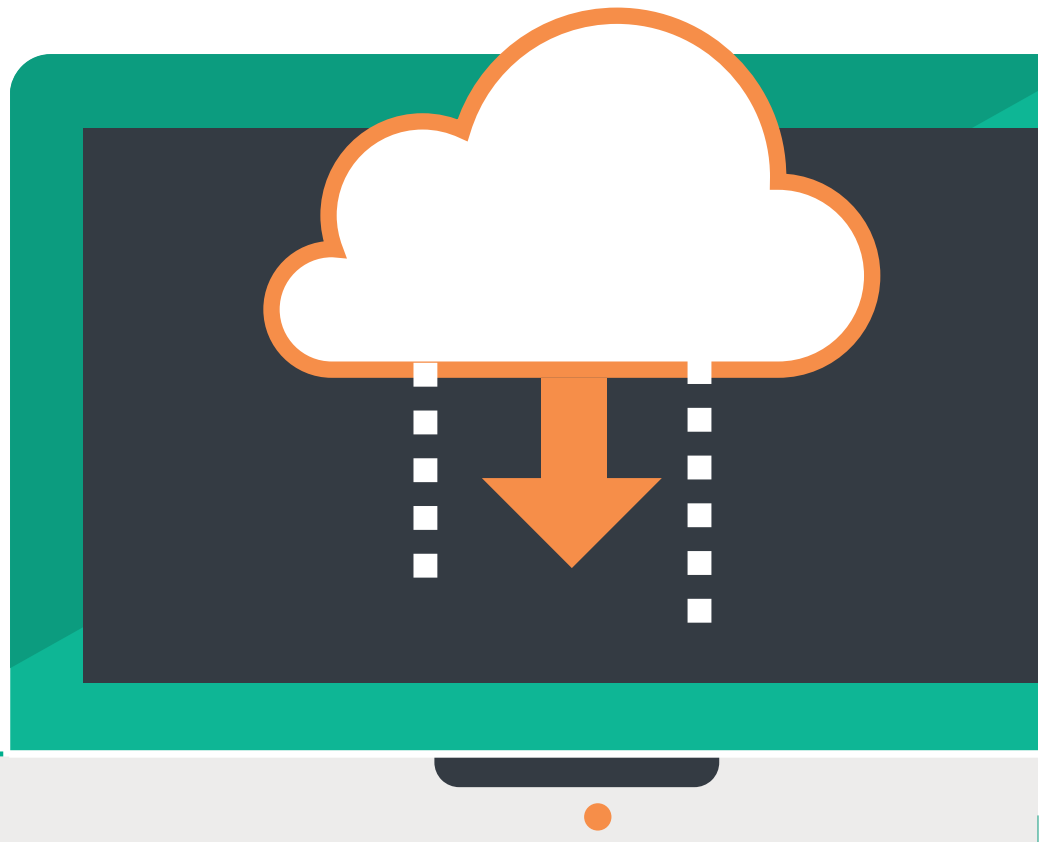

everteam.discover is a powerful tool that lets you find, organize, classify and manage content located in systems and repositories across your organization.

All companies deal with multiple systems that store information (e.g. CRM, ERP, file shares, email, cloud drives). These siloed systems lead companies to lose global control of their information, increasing the costs and risks related to data theft and non-compliance of privacy and retention regulations.

everteam.discover enables you to find, clean, organize and search all your content from a central location, helping you simplify regulatory compliance, preserve sensitive data, migrate documents to archives or the cloud.

KEY CAPABILITIES

- Connect to multiple content sources (network drives, cloud storage, SharePoint, Exchange...) and enterprise apps (SAP, Oracle, etc.).
- Automate the discovery of duplicate and obsolete content as well as personal and sensitive information.
- Leverage machine learning and human curation to enhance existing metadata, categorize, and enrich information.
- Organize and classify content based on corporate rules, business taxonomy or file plans.
- Move and migrate items from a source system to a target system or application to ensure content preservation of your most sensitive information assets.
- Perform advanced searches (language detection, semantic expansion).
- Create personalized self-service dashboards to more efficiently find and retrieve information.

everteam.discover allows you to:

- Find, organize, enrich, classify information
- Identify personal & sensitive information
- Address regulatory & compliance requirements
- Migrate content to the cloud
- Implement records & retention management
- Provide a 360° view of the information

everteam.policy

Comprehensive, Coherent Information Policy Management

everteam.policy provides a centralized, easy-to-use solution for authoring, managing and publishing information governance policies and retention rules for the entire enterprise.

Effective information governance is critical. With fully defined and applied governance policies, you reduce risks, save money and meet privacy and data retention regulations.

KEY CAPABILITIES

- Create comprehensive policy definitions following your specific requirements and the legal and regulatory rules that apply to your company.
- Define advanced lifecycle rules such as support for intermediate lifecycle milestones or the management of jurisdiction exceptions to fit with the needs of the most demanding multinational companies.
- Demonstrate clear evidence of compliance by mapping policies to a library of legal and compliance requirements.
- Communicate and share governance policies across the organization, publishing them to the Intranet or company portal, or sending a URL link via email or another communication method.
- Integrate with everteam.discover and other business systems that enforce retention and data minimization rules using everteam.policy public APIs.

everteam.policy allows you to:

- Author, manage and publish information policies and retention rules for the enterprise
- Define complete data lifecycles for every class of information
- Ensure compliance with corporate and regulatory requirements such as ISO 27001, GDPR, and CCPA.
- Publish your organization's retention schedule

Nyxeia is a preferred Everteam Kyocera reseller and OEM, dedicated to helping organizations gain new insights from their valuable information assets. Through powerful solutions for information discovery, policy management, and processing, we help our customers be more efficient, informed, and compliant with privacy protection regulations.
