.preserve

Informed, Compliant
Digital Preservation Service

COMPREHENSIVE END-TO-END ASSET MANAGEMENT

For many organizations, the information preservation process is guided by objectives like storage optimization that may not fully align with the organization's legal or regulatory requirements. **.preserve** provides a lightweight digital preservation capability that is tightly integrated with **.discover**'s powerful content categorization features and informed by **.policy**'s business processes. The result is a robust digital preservation solution that is both content and compliance-aware. With **.preserve,** IT and records staff can work seamlessly to optimize storage costs, reduce end-user data clutter, and consistently adhere to records processes and multi-jurisdictional legal requirements.
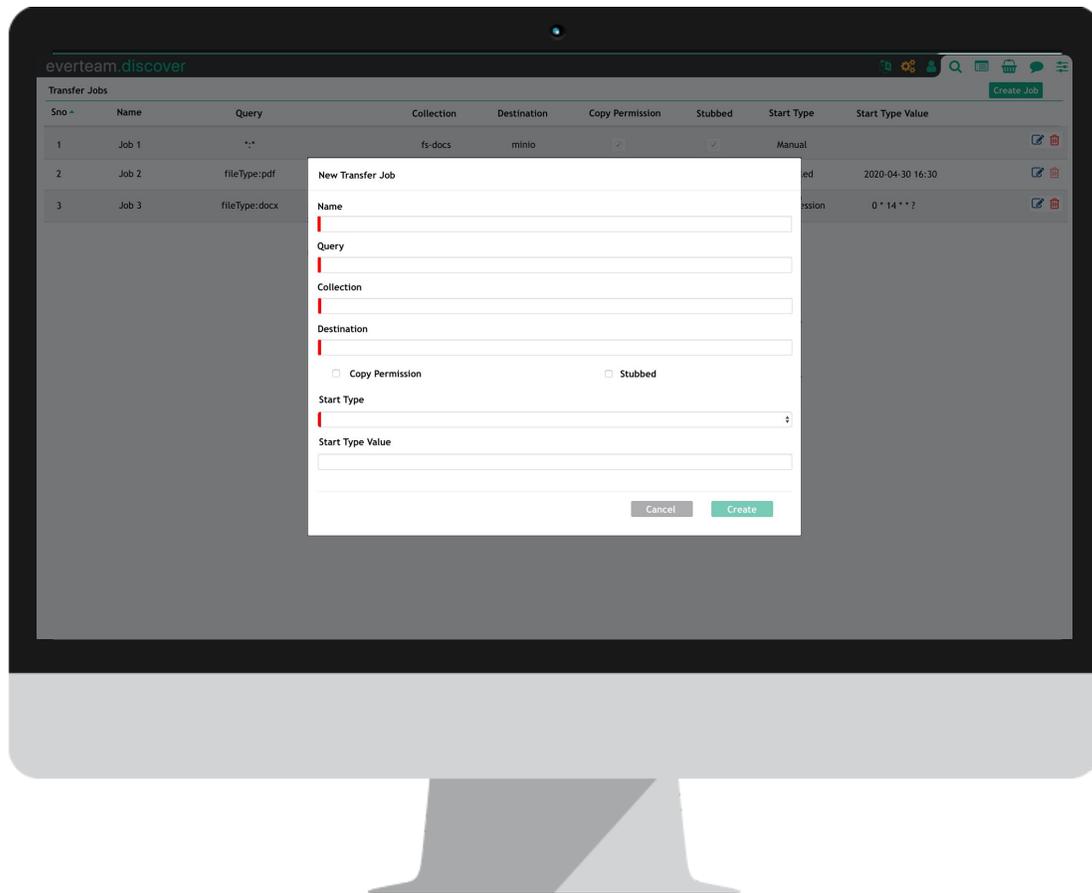

USE .PRESERVE TO:

- Preserve information assets based on policies, conditional rules, or user-driven manual inputs.
- Ensure strong compliance with defined preserved asset processes used to meet regulatory, industry, or business-specific requirements.
- Reduce the volume of seldom-used content in circulation to improve the efficiency of end-users.
- Support efficient and timely response to litigation through legal hold features that augment powerful information discovery capabilities.

KEY CAPABILITIES

- Preserve information to S3 compliant cloud or on-premise storage systems, including support for tiered or mixed-mode storage approaches.
- Job processing, monitoring, and management features to ensure efficient, automated, and error-free preservation.
- Legal hold and release from within the .discover user interface.
- Reporting and audit trail functionality to support audits, litigation, and other process traceability and decision support requirements.

KEY CAPABILITIES (CONTINUED)

- No separate application user interface needed to access preserved material for authorized users from within the **.discover** user interface.
- Restore features to allow administrators to roll-back preservation processes and return assets to their source locations as-needed.

.preserve

Use the **.preserve** solution to more tightly align your IT and legal / compliance requirements. **.preserve** is an easy-to-deploy, simple to use digital preservation service that provides an end-to-end solution for governing your information assets throughout their entire lifecycle.
